

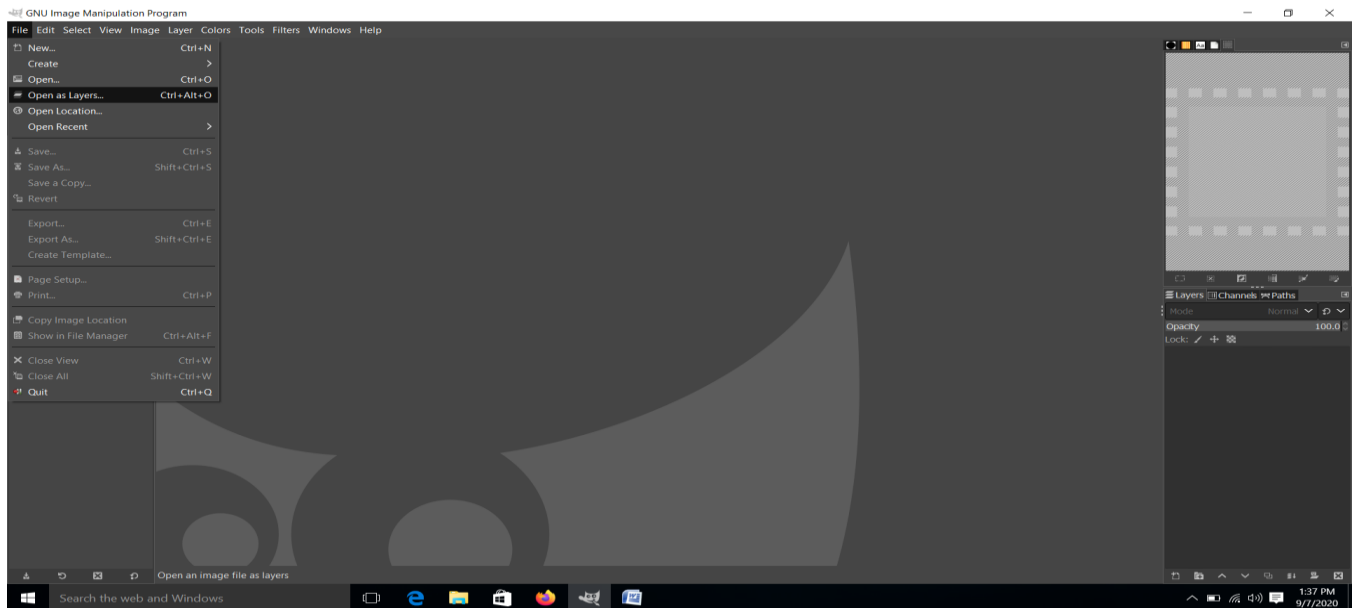

Graphics and Animation Tools Lab

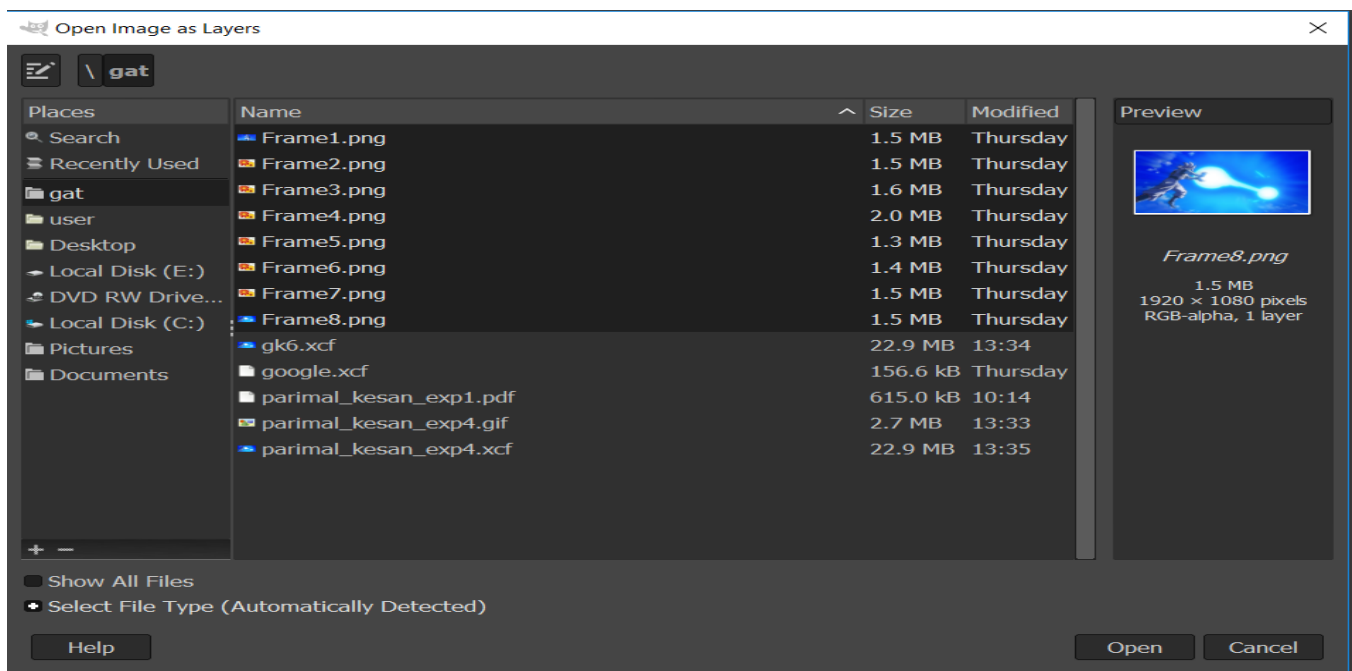

Experiment-4: Design your own animation using GIMP.

Steps to create an animation using GIMP-

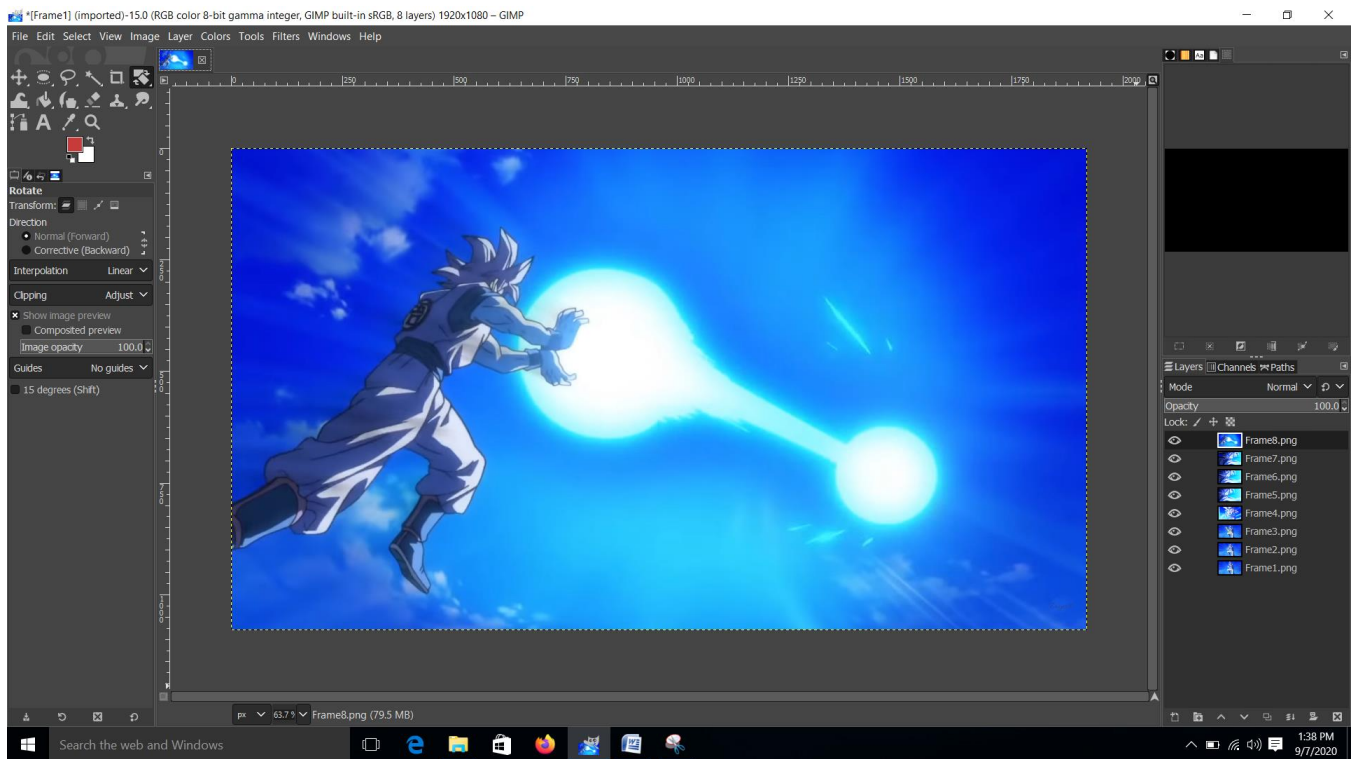

Step-1. Go to File→Open as Layers to open the image file as layers.

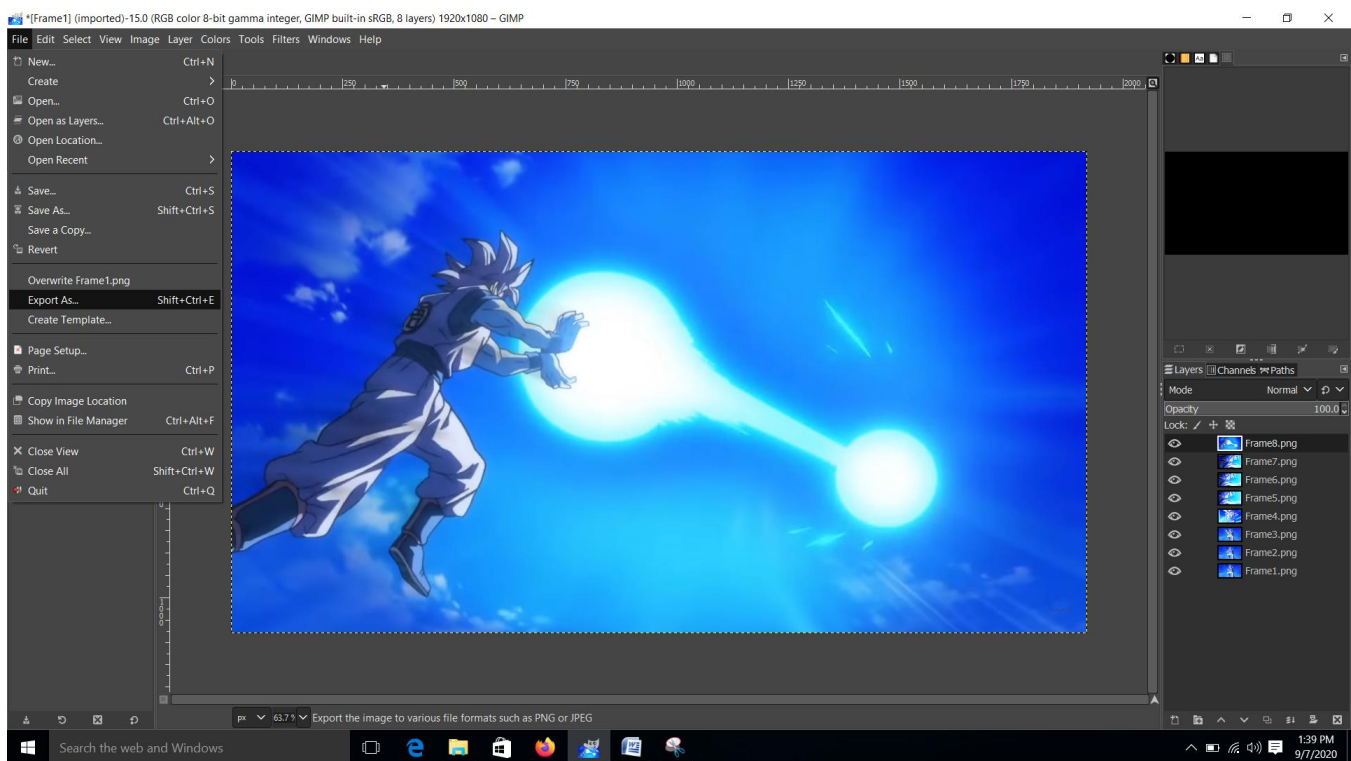

Step-2. Select the image files which you want to open as layers for animation and click on Open.

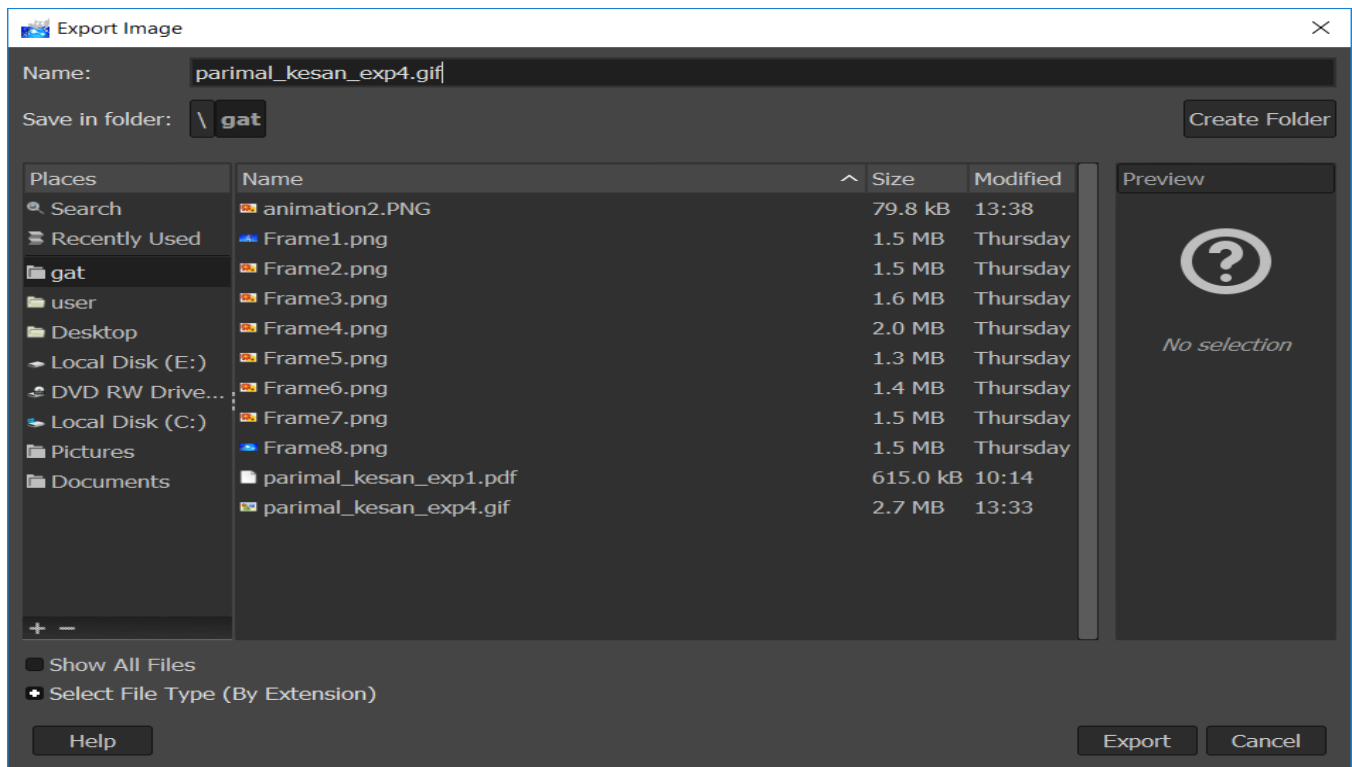

Step-3. All the image files will get imported as layers as shown below.

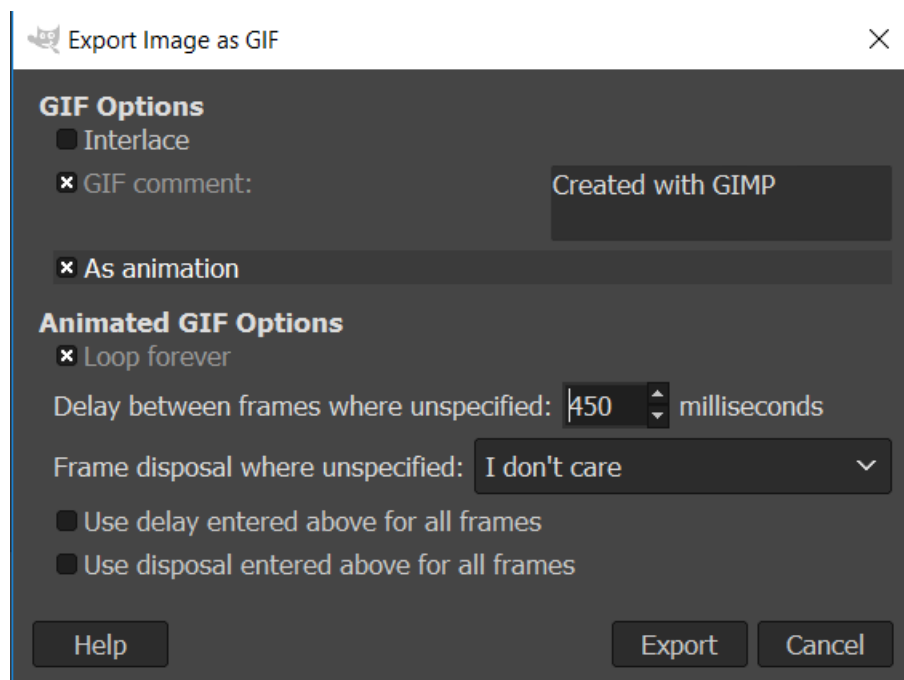

Step-4. Now, go to File→Export As to export the image as a GIF.

Step-5. Select .gif as file extension and click on Export.

Step-6. Select As animation in the pop-up menu to export the GIF as an animation and click on Export.

The animation has been exported which can be viewed in any image viewer software or browser.
